The non-opening skylight (1) is provided with an adjustable shade (7) to control the amount of light entering the skylight. An adjustable ventilator is provided in the skylight structure whereby entry or exit of air is permitted through the skylight.

The adjustable ventilator comprises a hinged element located and orientated to minimise entry of water. The adjustable ventilator is removable bodily to and from the skylight structure by hinged joints.

ADVANTAGE - Reduced heat loss in winter. (14pp
